FITSENSE – AI-POWERED FITNESS RECOMMENDATION SYSTEM

PROPOSED SOLUTION

Field	Details
Team ID	SWTID-2026-2908
Project Name	FitSense – AI-Powered Fitness Recommendation System
Team Size	4
Team Leader	ELIZABETH MARY ROBERTS
Team Member	KOWSALYA N
Team Member	NEDHA THASEF H
Team Member	RAFATHUNISSA S

S.No.	Parameter	Description
1	Problem Statement (Problem to be solved)	Users find it difficult to maintain workout records, search previous workouts, calculate workout information, and receive personalized fitness guidance based on their individual goals, experience, and history.
2	Idea / Solution description	FitSense is an AI-powered fitness backend that securely manages users and workout records and uses Google Gemini AI to generate personalized workout plans, weekly exercise suggestions, training tips, safety recommendations, performance analysis, improvement suggestions, and motivational advice.
3	Novelty / Uniqueness	Combines centralized workout history with AI personalization. Recommendations use user age, fitness goal, experience level, and workout statistics rather than providing only generic exercise suggestions.
4	Social Impact / Customer Satisfaction	Makes fitness tracking easier and more organized, reduces manual effort, provides accessible personalized guidance, and helps users understand their workout performance and improve consistency.
5	Business Model (Revenue Model)	A freemium model can provide core workout tracking for free and premium AI recommendations, advanced insights, analytics, and future integrations as paid features. Institutional or gym partnerships can also be considered.
6	Scalability of the Solution	The REST API and modular MVC architecture can support more users and features. Future expansion can include nutrition tracking, BMI calculation, wearable integration, reminders, dashboards, and additional AI capabilities.
